

CSCE 242 Project Part 1

Website Name: The Anglers Guide to South Carolina

Website Description: My plan for the anglers guide is to create a website that teaches people about fishing for new and experienced anglers in the state of South Carolina. The website will include information about different species of fish and where they can be found. It will also explain the different types of fishing gear like tackle and bait that anglers in South Carolina use. Visitors will be able to learn about different locations to fish and the techniques that are successful in those locations. The website will use photographs and paragraphs to make the information informative and easy to understand.

Website Pages

1. Homepage: An introduction to the website with all sorts of information and pictures of fish. It will also have links to other sections of the website
2. Fish species: There will be a page with all of the different types of species in South Carolina and some information about them.
3. Fishing locations: This section will have all the best spots to fish and what type of species will be found there
4. Gear: this section will have what kind of gear works best to catch different fish
5. Fishing tips: this section will have tips for different fishing spots and what kind of techniques to use
